SWEET PEAS.

A selection of the best standard varieties.

The seed should be sown very early in deep soil, enriched with decomposed manure. Make a trench 6 inches deep. In this sow the seed, and cover about one inch. As the plants grow, fill in until the drill is full. Carefully avoid covering the young plants. Sweet Peas delight in a sunny situation, and abundance of moisture. As fast as the flowers come into full bloom, they should be cut off; for if the pods are allowed to form, the plants will stop blooming.
